4# Spinel - Salzburger Vienna Lager

- Gravity 13.3 BLG
- ABV 5.5 %
- IBU **28**
- SRM **12.1**
- Style Vienna Lager

Batch size

- Expected quantity of finished beer 38 liter(s)
- Trub loss 5 %
- Size with trub loss 39.9 liter(s)
- · Boil time 60 min
- Evaporation rate 10 %/h
- Boil size 48.1 liter(s)

Mash information

- Mash efficiency 75 %
- Liquor-to-grist ratio 3 liter(s) / kg Mash size 30.7 liter(s)
- Total mash volume 40.9 liter(s)

Steps

- Temp 67 C, Time 60 min
 Temp 76 C, Time 5 min

Mash step by step

- Heat up 30.7 liter(s) of strike water to 74.8C
- Add grains
- Keep mash 60 min at 67C
- Keep mash 5 min at 76C
- Sparge using 27.6 liter(s) of 76C water or to achieve 48.1 liter(s) of wort

Fermentables

Туре	Name	Amount	Yield	EBC
Grain	BESTMALZ - Best Vienna	3 kg (29.4%)	80.5 %	9
Grain	BESTMALZ - Best Minich	4 kg (39.1%)	80.5 %	16
Grain	Viking Pale Ale malt	3 kg (29.4%)	80 %	5
Grain	Czekoladowy	0.22 kg <i>(2.2%)</i>	60 %	788

Hops

Use for	Name	Amount	Time	Alpha acid
Boil	Columbus/Tomahawk/Zeus	30 g	60 min	15.5 %
Boil	Hallertau	40 g	5 min	4.5 %

Yeasts

Name	Туре	Form	Amount	Laboratory
FM31 Bawarska Dolina	Lager	Liquid	100 ml	Fermentum Mobile

Notes

 # Pierwsza warka "gotowana z silikonem" -> Porównać z Ulvospinelem, czy jest różnica. -Nie ma. Rozcieńczyć do 12.6 BLG.

 ${\rm Ok.6}$ - 10 dni w 10 st. C, potem 4 dni w 16 st. C i na dzień przed rozlewem cold crash 1 st. C. DIRECTIONS

Mill the grains and mix with 3.2 gallons (12.1 l) of 163°F (73°C) strike water to reach a mash temperature of 152°F (67°C). Hold this temperature for 60 minutes. Vorlauf until your runnings are clear, then run off into the kettle. Sparge the grains with 4.1 gallons (15.4 l) and top up as necessary to obtain 6 gallons (23 l) of wort. Boil for 60 minutes, following the hops schedule.

After the boil, chill the wort to slightly below fermentation temperature, about $50^{\circ}F$ ($10^{\circ}C$). Aerate the wort with pure oxygen or filtered air and pitch the yeast. Ferment at $50^{\circ}F$ ($10^{\circ}C$) for 3 days, then allow temperature to rise to $60^{\circ}F$ ($16^{\circ}C$) over the next 4 days. Upon completion of fermentation, crash the beer to $35^{\circ}F$ ($2^{\circ}C$), then bottle or keg and carbonate to approximately 2.25 volumes of CO2. Tips for Success

Let this beer sit in the fridge for a solid 4–6 weeks before opening it! Not only will the lagering time allow the beer to clear to a nice crystalline amber, but it will also round off the bitterness and lingering hints of roast, leaving behind a dry, toasty, floral delight. That chocolate malt is the secret ingredient: it keeps the beer nice and dry for months, and without it, you could easily end up with an overly sweet melanoidin bomb. Jan 26, 2021, 5:46 PM
